

# Standard Pellet System

The server will hold plates of up to 23 cm in diameter. The CFC-free polyurethane foam used to insulate both the server and the cover is highly efficient, so meals can be kept at an appetizingly warm temperature for long periods. Two types of pellet-system cover are available, Standard and Allure. Both types can be supplied in a variety of colours. The dome-shaped covers leave plenty of vertical clearance for the food on the plate. The generously dimensioned handle on the Allure cover guarantees ease and safety of handling. The system components are stored on special (TRG1750) system trolleys.

## Dimensions

Server: approx. 244 mm Ø, approx. 38 mm in height  
 Cover: approx. 259 mm Ø, approx. 66 mm in height

## Models
